

COMPLEX SERVICES IN PLASMA TECHNOLOGIES

Aim of developed technology

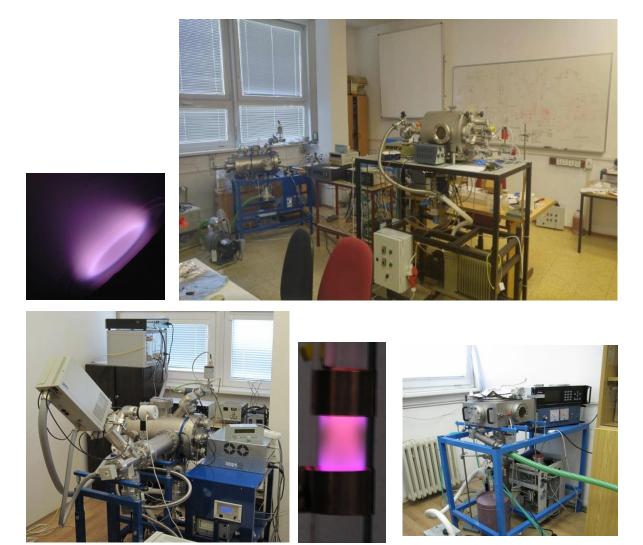

Available experimental equipment is suitable for development of surface modifications and thin films depositions with assistance of plasma processes.

Our analytical laboratories are ready to solve any problem connected to surfaces and thin films.

Advantages of technology

We can perform plasma treatments of powders.

We can provide development in application areas with glow discharges, plasma polymerizations, magnetron sputtering (DC, RF , pulse processes).

Address of technology provider/inventor: J. E. Purkyně Úniversity in Ústí nad Labem Faculty of Science České mládeže 8 400 96 Ústí nad Labem
